

Lessons samples

- In this topic we present some ideas of tested lesson among our project. The feedback of teachers and students was payed attention while designing these lessons.
- You can download and import all lessons in you own moodle course.
- Good luck and feel free to give your feedback in LESSONS FEEDBACK forum!

BLENDIT

- Lesson #01 - Cryptography
- [1. Cryptography introductionLesson](#)

1. Cryptography introduction

Lesson Introduction

During this lesson we will learn something about an important issue: cryptography!

Cryptography seems quite an esoteric subject, yet it is fundamental to our world in so many ways. It's essential in everyday life. When we buy from a site we are relying upon public key cryptography to keep our credit card details safe. Without cryptography cash machines would not be possible, as the machines would not be able to reliably communicate with the bank computers. Without cryptographic ideas, you would not be able to read this website.

- [3. Cryptography quiz](#)

3. Cryptography quiz

This is a short quiz about cryptography, mainly focused on the Caesar cipher.

To answer some questions you need to use some tools (print them!):

- [Caesar wheel](#) and
- [Vigenere square](#).

You can also use online tools.

- Lesson #02 - Practical Spanish

[1. Practical Spanish introductionLesson](#)

Lesson Introduction

During this lesson you will learn about Practical Spanish!

This lesson will have three introduction activities for you to do before class. To do these activities you have to visit TED-Ed and register in: <http://ed.ted.com>.
